I am a learner at IIT Madras currently doing Enginnering at NIT Rourkela

Description

We have to create a music player application an user can view lyrics CRUD operation on songs and CRUD operation on Albums and Crud operation on Playlist created by user also creator for Songs

Technologies used

1)Flask -To build the application
2)Flask SQLAlchemy-To have a use of ORM
3)Flask_login -To use flask login manager
4)Werkzeug.security:For password hashing
5)Bootsrap: For user interface frontend

DB Schema Design

Architecture and Features

All HTML file are present in template all business logic present in app.py database file present in instance

Relationship like many to many one to many are implemented between the models .

MVC model is implemented
